My Professional Knowledge and Skills Base

Professional Expertise

4. Research skills

Using research techniques and knowledge of information resources to support organisational, client or personal research projects to provide new findings and data. Includes knowledge of research methods, literature searching, citations, statistics and statistical analysis and report writing.

Why should librarians do research?

“A professional field should have an established and growing body of research evidence to help support decisions and knowledge within the field [italics added]” (Koufogiannakis & Brettle, 2016, p. 29).
Research evidence is NOT:

- “How we done it good” (Wilson, 2013, p. 113)
- Opinions – “I think that people need/want x” 😊
- Results of committee meeting discussions
- Asking your 11-year-old son
The case for doing research

“No Authorities had ascertained the public’s view on library apps, suggesting a lack of forward planning. A simple online questionnaire could be developed to gauge patrons’ interest, producing valuable data to inform future policy and implementation. Two-way communication is a key feature of Library 2.0 and 3.0 and should be indigenous to library services” (Kerr & Rasmussen Pennington, 2018, p. 245)
Research evidence is essential to being evidence-based

• “being evidence based means that we consider many forms of evidence in conjunction with one another to form a well informed and considered professional opinion” (Koufogiannakis & Brettle, 2016, p. 27)

• Research evidence is one part of being evidence-based: finding and creating new knowledge that can then be implemented to improve user services, daily work practices, anything else we need to do in our professional settings… (also local evidence and professional knowledge)
Barriers to EBLIP (Booth, 2004; Wilson, 2016)

- **Environment**: rate of change, poor access to evidence base, cultural barriers
- **Evidence**: limitations of evidence base, inappropriate research orientation
- **Workplace**: lack of time, lack of money, lack of infrastructure, lack of support
- **Profession**: leadership, lack of research culture, professional characteristics, communications issues, need for training, failure to implement results
Needs for and characteristics of a practitioner-researcher (Wilson, 2016)

• Lack of existing actionable research, ‘remote’ and slow academic ILS research
• Chance to increase profile, professionally and organisationally
• “a person engaged in the practice of a skilled profession who also conducts research” (p. 83)
• Focus on users, reflective practice
• Curiosity, interest in growth, belief in ability, to develop, access to mentor, peers, culture
How to collect, analyse, and use research evidence

• Does it exist already? Do a lit review. If not, you will need to create it.
• Write good research questions (Booth, 2006)
• Consider how the questions can best be answered with appropriate methods
• Collect the research data
• Analyse it and answer your questions
• Implement and disseminate it
Types of research data collection

- Surveys
- Interviews
- Focus groups
- Usability studies
- Observation: in person or online
- Bibliomining (Nicholson, 2006)
- Existing literature – systematic review
  – But is it any good? (Glynn, 2006)
Types of research data analysis

• Transcription and content analysis
• Statistics (as simple as percentages from a survey)
• Secondary analysis
• Data mining techniques
Next steps (Wilson, 2013, pp. 115-116)

• Determine the needs of practitioner-researchers so they can be better supported.
• Focus on effective dissemination of research findings so they are accessible and usable by practitioners.
• Urge LIS educators to incorporate more practitioner research into the curriculum to expose students to the wide variety of research and research possibilities that are available to them as practitioners.
Resources to help you from LIRG

About this course

This course has been developed by the Library and Information Research Group. It has been designed to help beginner researchers to get started with research. To help them develop the evidence to improve their practice and service. The three main sections are:

1. Making research approachable, how research can help you in your role,
2. How to plan research, what to consider,
3. Doing research

PKSB Areas

The course supports the following areas of the PKSB: 4.1 – understanding research; 12.5 - communication skills; 9.4 – demonstrating value

About Library and Information Research Group

LIRG was formed in 1977 to draw together professionals interested in bringing library and information research into practice. We became a
Resources to help you from LIRG

Library and Information Research

CILIP’s Library and Information Research Group publishes Library and Information Research. It publishes both refereed and non-refereed submissions. Before 2003 the journal was published under the title Library and Information Research News.

Vol 41, No 125 (2017)

Table of Contents

Editorial
Editorial: Research methodology in library and information studies (LIS) 2018
Judith Broady-Preston

Refereed Research Articles
Making sense of methods – a conversation about qualitative research in library and information studies
Edward Francis Abbott-Halpin, Antony Bryant

An evaluation of phenomenography
Amanda F. Cosham

Meta-Ethnography and its Potential for Theory Building in Library and Information Science
Nancy Everhart, Melissa P. Johnston

Institutional ethnography: A sociology for librarianship
Nicole K Dalmer, Roz Stooke, Pam McKenzie

Threshold concepts and core competences in the library and information science (LIS) domain:
Methodologies for discovery
Virginia M. Tucker

Participant-driven photo-elicitation in library settings: A methodological discussion
Shahroz Bedi, Jenaya Webb
